

Fall 2006 COSC 382 Organization of Programming Languages

Dr. Gene B. Chase

Project Topic Area

September 11, 2006

As your syllabus say, for Wednesday, September 13, 2006, submit a one-paragraph statement about the topic area that you would like to investigate further in programming languages to satisfy the project component of our course. Pages 5, 6, and 7 of your syllabus have some ideas. Others might include Ruby or Python. You should choose a universal language, not a special-purpose language.

The statement should be typed on one side of a clean white 8.5"x11" piece of paper with a title describing the topic, the date due, and your name on it, or names if you have a project idea for two.

Only one individual or team can do the same project, and Chuck Craig already asked to study COBOL, so if you had that in mind too, keep thinking.

If you have additional questions, want to discuss potential topics further, or want to stake a claim on a topic, use email or visit my office. My office hours are all day Tuesday. I regret that this afternoon is already filled up.
